

# Eviction among Children Born in Large U.S. Cities: Prevalence, Stratification, and Policy Levers

Ian Lundberg  
Princeton University

Joint work with Louis Donnelly, Sarah Gold,  
Sara McLanahan, and Jeanne Brooks-Gunn

12 August 2019  
Annual Meeting of the  
American Sociological Association

Slides and source code are available at <https://github.com/ilundberg/slides>. We thank Sara S. McLanahan, Brandon M. Stewart, Matthew J. Salganik, Catherine Doren, three anonymous reviewers, and members of the Stewart Lab, Inequality Working Group, and Fragile Families Working Group for comments on earlier drafts. All errors are our own. Parts of this research were previously presented at APPAM 2018, PAA 2019, and a housing roundtable sponsored by the W.T. Grant Foundation at Princeton University. Research reported in this publication was supported by the Robert Wood Johnson Foundation and by The Eunice Kennedy Shriver National Institute of Child Health & Human Development of the National Institutes of Health under Award Number P2CHD047879. Funding for the Fragile Families Study was provided through Award Numbers R01HD36916, R01HD39135, and R01HD40421 and by a consortium of private foundations. The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Institutes of Health.

Two claims in separate papers:

- ① Eviction is **prevalent** and **stratified**
- ② **Policy** can help

- Risk **accumulates** over time (Duncan & Rodgers 1988)

## Research question:

What proportion of children born in large U.S. cities in 1998–2000 were ever evicted between birth and age 15?

Published studies suggest eviction is **rare in any given year**.

- 0.3 % of U.S. households in 12 months (Bauman 2003)
- 2.3 % in court records for 2016 (Desmond et al. 2018)

Eviction may be more common over the **course of childhood**

- Families with children face a **greater risk** (Desmond et al. 2013)
- Risk **accumulates** over time (Duncan & Rodgers 1988)

## Research question:

What proportion of children born in large U.S. cities in 1998–2000 were **ever evicted** between birth and age 15?

- Sampling frame: Births in 1998–2000 in U.S. cities with populations over 200,000
- $N = 4,898$  births in 20 cities
  - 16 cities are a probability sample
  - 4 cities added for funder interests
- Oversample (3:1) of non-marital births
- Interviews with each parent at child age 1, 3, 5, 9, and 15

## Survey instrument:

In the past 12 months, were you evicted from your home or apartment for not paying the rent or mortgage?

- Reported by mother or father with whom child lives more than half the time

## Child ages covered by eviction reports

## Child ages covered by eviction reports

## Child ages covered by eviction reports

## Child ages covered by eviction reports

## Child ages covered by eviction reports

**Goal:** Proportion evicted at any point

**b. Three estimates of the proportion ever evicted by age 15****Absolute lower bound**

Estimate 1: 7.9 % (CI: 7.1–8.9 %)

Impute survey nonresponse

**Multiple imputation**

Estimate 2: 9.2 % (CI: 7.3–11.1 %)

Infer prevalence over years when no survey was conducted

**Multilevel logistic regression**

Model fit on five annual reports

15-year prevalence inferred from model parameters

Estimate 3: Overall 15-year prevalence = 14.8 % (CI: 12.6–17.2 %)

0 1 2 3 4 5 8 9 14 15

Child Age

Given our model, we can aggregate across the covariate values of specific **subgroups**.
